IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER
MONITORING REQUIREMENTS NOT MET FOR

ASHLAND COMMUNITY, WV3302417

We are required to monitor your drinking water on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Between 1/1/2019 and 12/31/2019, we failed to submit the required samples as indicated below and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the required monitoring and the compliance period.

Required Monitoring	Compliance Period
27, MONITORING, ROUTINE (DBP), MAJOR Failure to monitor for Trihalomethanes (TTHM's)	1/1/2019 to 12/31/2019

What happened? What is being done? (Describe corrective action)

Samples were collected in the proper monitoring period but not submitted in a timely manner. Every effort is being made to correct the problem

For more information, please contact Mans Brewster (Contact name) at 304-297-2622 (Phone number)
or 21901 Rocket Boys Dr Welch WV 24801 (Mailing address)

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER
Exceeded Maximum Contaminant Level (MCL) for Total Trihalomethanes

MCDOWELL COUNTY PSD HAVACO, WV3302440

Our water system recently violated a drinking water standard. Although this is not an emergency, you, as our customers have the right to know what happened, what you should do, and what we are doing to correct the situation.

We routinely monitor for the presence of drinking water contaminants. Test results for 10/1/2019 and 12/31/2019 show that our system exceeds the standard or maximum contaminant level (MCL) for Total Trihalomethanes.

The average level of Total Trihalomethanes over the last four quarters was 83.0µg/L at 100 HEADQUARTERS LANE location. The standard for Total Trihalomethanes is 80.0µg/L.

What should I do?

You do not need to use an alternative (e.g. bottled) water supply. However, if you have specific health concerns, it is recommended that you consult with your doctor.

What does this mean?

This is not an immediate risk. If it had been, you would have been notified immediately. However, some people who drink water containing *Total Trihalomethanes (TTHM's)* in excess of the MCL over many years may have an increased risk of getting cancer.

What happened? What is being done? (Describe corrective action)

We are currently trying to improve circulation and reduce water age. By increasing the daily variation in water level in the tank can force turnover of water in the tank. Changing the water level in the tank not only forces water in and out of the tank, but also changes the mixing patterns within the tank reducing the likelihood of stagnant water remaining in the tank. Continual system flushing which will reduce the age of the water in the system offers positive potential for reducing DBP levels.

We will continue to monitor and report the TTHM/HAA5 results to you on a quarterly basis as long as the running annual average exceeds the MCL

For more information, please contact Maria Brewster (Contact name) at 304-297-2622 (Phone number)
